

Resource

Ferrous metals,
 how you want them,
 where you want them,
 when you want them.

Supplying ferrous metals is all about flexibility; being able to deliver your resources in the right grade, at the right price, at the right time. We will provide exemplary service, quality and ethics, **everything else is your call.**

We can supply any ferrous grade you require for delivery in the UK or abroad, by container or vessel, ranging from small barges and coasters to any Panamax size vessel. We've built our reputation on producing a quality product, so you can be confident that you will receive material to the correct specification, and our experienced logistics and shipping team will ensure it is delivered when you need it. We produce most grades of ferrous scrap, all of which conform to internationally recognised specifications. Of course we are always happy to discuss your requirements in detail and investigate alternatives which may suit your process.

RECYCLING TO CREATE RESOURCE

Resource

Timescales are important to us too. With rail networks, a large fleet of vehicles, deep and short sea terminals, specialist container loading operations and a dedicated international team, we can deliver anywhere in the world, to meet your deadlines. We take great pride in getting the job done right.

Choosing recycled material is far more efficient than using virgin resources, so you can feel good about your contribution to protecting the environment. We aim to make you feel good about who you're sourcing them from too.

For resources combined
with resourcefulness:
